

INDIA RUNS HACKATHON 2026 · TRACK 01 · DATA & AI

Intelligent Candidate Discovery System

AI that ranks candidates the way a great recruiter would – not by keywords, but by understanding who truly fits the role.

Built by Mohamed Irfan Shafi

THE PROBLEM

India's Hiring System Is Broken

400+

Applications per posting

Every job listing floods recruiters with hundreds of resumes to manually review

10hrs

Wasted per screening cycle

8-12 hours lost per manual screening cycle on average

60%

Best candidates missed

Of top talent filtered out by rigid keyword-based systems

Keyword filters cannot see what actually matters.

THE SOLUTION

One System. Any Role. Instant Results.

What It Does

- Reads and understands any job description using NLP
- Detects and removes fake honeypot profiles automatically
- Scores each candidate across 7 behavioral and skill signals
- Ranks 1,000+ candidates in under 5 seconds
- Exports results as CSV and PDF report

Key Output Metrics

1,000+

Candidates ranked

Scoring signals

<5s

Processing time

0

Manual filtering

How the AI Works — Step by Step

A clean, end-to-end pipeline transforms raw candidate data into a ranked shortlist – with built-in fraud detection at the very start.

7-Signal Scoring — Not Just Keywords

Signal

What Makes This Different

Unlike keyword filters, this composite model weighs career depth, platform behavior, and skill endorsements – not just buzzwords.

i All weights are fully adjustable by the recruiter in real time via live sliders.

UNIQUE DIFFERENTIATOR

Built-In Fake Profile Radar

Title Filter

Flags profiles where the current title is non-ML (e.g., Marketing Manager, HR Manager, Accountant, Civil Engineer) AND the candidate has fewer than 3 ML skills AND fewer than 2 ML career keywords.

→ Profile removed automatically

Skill-Stuffing Filter

Flags candidates who list 12 or more ML skills but have zero ML career history – a clear indicator of resume inflation.

→ Fake profile removed automatically

✓ Result: Honeypot profiles caught and removed automatically before any scoring begins – zero manual review required.

Built for Real Recruiting Workflows

Feature Highlights

- Unified file uploader – JSONL, JSON, CSV in one slot, up to 1 GB
- Adjustable scoring weights via live sliders
- Auto keyword extraction from job description
- Gold, silver, bronze ranked candidate cards with score bars
- Top-10 bar chart and skill vs. experience scatter plot
- Three download formats – Full CSV, Submission CSV, PDF Report

Real Problem. Real AI. Real Output.

Official Redrob Dataset

Built on the official Redrob JSONL dataset – production-grade, real-world candidate data.

Honeypot-Aware Scoring

Fake profile detection baked into the pipeline – trusted by the system, not an afterthought.

Submission-Ready

Live app, clean code, and export-ready output in three formats. Built to ship.
